Help Meet the Growing Need!

Become a CSA Certified CNG Fuel System Inspector

The Market is Moving Towards Alternative Fuels

Today, many industries have made the conversion to using safe, cleaner-burning natural gas to power their vehicles. Fleets of all sizes, consisting of trucks, buses and cars owned and operated by cities and governments, school districts, refuse collection companies and a host of other private operations, are now running on natural gas.

CNG cylinders and fuel systems that power natural gas vehicles must be visually inspected for external damage and deterioration after a motor vehicle accident and at least every 36 months or 36,000 miles, or at the time of any reinstallation. The Fuel System Inspector Certification was developed to meet the needs of the natural gas vehicle marketplace.

The CSA America CNG Fuel System Certification Program is Designed by Experts in the Field

CSA America's Fuel System Inspector Certification is designed to certify that an individual possesses the body of knowledge recommended by Federal Motor Vehicle Safety Standard and the "NGV 2 Standard for CNG Cylinder Containers."

CNG Certification offers the consistent assessment of an individual's proficiency in the area of CNG fuel system inspection, and provides formal recognition of his or her knowledge and understanding. The program helps to reinforce the need for candidates to be adequately trained and then tested to levels

of competence set by a committee of experts. Procedures are also in place to re-assess certified inspectors every three years to ensure they remain up to date on technical developments and industry changes.

Vehicle owners also benefit because the program develops a pool of certified inspectors from whom they can confidently obtain the recommended fuel system inspections. Our CSA America web site contains a national registry of certified inspectors located throughout the U.S. and Canada.

CSA AMERICA INC

What Does the CNG Fuel System Inspector Certification Program Offer?

- Testing for fuel system certification
- Formal recognition of knowledge and understanding
- Listing on the national registry of certified inspectors
- 3 year re-assessment on technical developments and industry changes

CSA America CNG Certification Is the Respected Mark of Expertise

CSA America is the only nationally recognized organization certifying CNG fuel system inspectors in the U.S. and Canada. Certified inspectors are trained by top industry professionals who are experienced certified inspectors themselves. Candidates then successfully complete an examination before achieving certification.

Individuals are certified to visually inspect containers, valves, PRDs (including vent system) and other fuel system components of compressed natural gas powered vehicles. Inspectors with CSA CNG certification are recognized for their knowledge and expertise across North America.

CSA America is a Pioneer in Safety and Performance Standards

As the publisher of the first fuel cell standard, CSA America is a respected leader in the unique and specialized area of developing safety and performance standards for alternative energy.

With our history in the field and our active involvement in the development of the standard for CNG cylinder fuel containers, it is only natural that we extend our expertise through to the certification of CNG fuel system inspectors.

Take the Next Step to Becoming a CSA Certified CNG Fuel System Inspector

For more information visit our web site at www.csa-america.org or contact us at **216-524-4990**

In order to prepare for the CNG Fuel System Inspector Certification exam, there are a number of organizations offering training for the CSA Certification exam. Visit our web site to learn more about training and certification.
